

Seed Primig in Okra [Abelmoschus esculentus (L.) moench]

Filesize: 9.6 MB

Reviews

A must buy book if you need to adding benefit. Better then never, though i am quite late in start reading this one. I am very happy to inform you that this is basically the very best book we have study during my own life and could be he finest ebook for possibly.

(Rodger Hane)

SEED PRIMIG IN OKRA [ABELMOSCHUS ESCULENTUS (L.) MOENCH]

LAP Lambert Academic Publishing Mai 2012, 2012. Taschenbuch. Book Condition: Neu. 220x150x4 mm. This item is printed on demand - Print on Demand Neuware - High quality seed is the key for successful agriculture in modern era. Seed priming is an invigoration treatment to improve the seed vigour. Seed priming is a technique of controlled hydration of seed to improve its performance and is widely used by improving the rate and uniformity of germination and decreasing seed sensitivity to external factor. Three fundamental aspects of seed priming are osmotic potential, priming temperature and priming duration. During priming the moisture content of a seed is controlled by soaking the seed in aerated salt or compounds of higher molecular weight such as polyethylene glycol (PEG). In okra, because of poor germination and seedling establishment the seed priming technique is highly effective and suitable. Hydro priming (soaking in water) is a common practice at farmer s level, but no systematic work has been done so far. Keeping the above facts in view, this book was written describing the effects of halo-priming and hydro-priming on biochemical and physiological changes in seed quality of okra germplasm. It also ascertains the relationship of priming with seed vigour in okra. 64 pp. Englisch.
